

Vertebrates

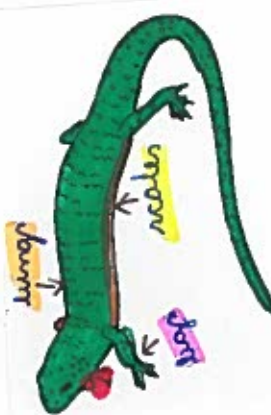

- They live in water.
- They have got scales and fins.
- They have gills instead of lungs.
- Most fish lay eggs.

- They live in water.
- They have got lungs and four legs.
- They lay their eggs in water.

- They feed their babies milk.
- They live on land.
- But some mammals, like whales, live in water.
- They have all got lungs.
- They have got hair and four legs.

- They live on land.
- They have got lungs and scales.
- They have got four legs, except for snakes.

- They live on land.
- But some live in water.
- They have got feathers, two legs and two wings.
- All birds lay eggs.

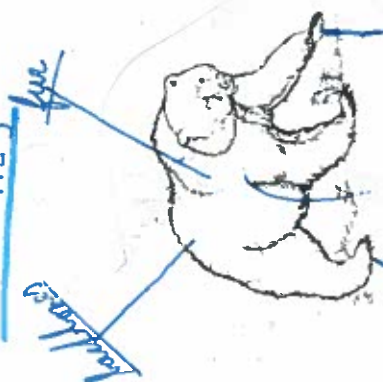

VERTEBRATES

FISH

Fish are cold-blooded animals and they live in water. They have got scales and fins. They haven't got lungs (but they don't look after their babies).

MAMMALS

All mammals are warm-blooded and they feed their babies milk. Most mammals like on land, but some mammals like whales, live in water, but they haven't got gills.

When amphibians are young, they live in water and they haven't got lungs. As they get older, they have got lungs and they can live on land. Their eggs are usually laid in water but they don't have to.

AMPHIBIANS

REPTILES

Most reptiles have four legs. They have got lungs and scales but not gills. They have got four legs, except for snakes. They have got scales and they can live on land. They have got four legs and two wings.
